

Title	QC Comments
SxS Rating - Ranking Disagreement	[Fail - Major Ranking Disagreement]: You and CB have a severe disagreement, such as one marks AD1/AD2 as at most 2 in at least 3 dimensions and auditor thinks it's at least a 6 or vice versa.
	[Non-Fail - Loose Ranking Disagreement] - For 2 dimensions, you and the contributor disagree on non-adjacent buckets
	- For 3+ dimensions, you and the contributor disagree on adjacent buckets
	[No Issues] - You agree with all of the contributor's ratings; OR any variance is a matter of subjective taste that the justification adequately supports.
Justification - Analysis	[Fail - Generic Justification] The justification does not provide any explanation other than stating the ranking, ex., "A is better."
	[Non-Fail - Generic Justification] The justification provides some explanation or evidence supporting the SxS ranking, but it did not address all the issues.
	[No Issues] The justification is very detailed: it explains what the brief asks for comprehensively and compares the deliverables in detail!
Rubric Criteria - Criteria Count (25–100)	[Fail - Criteria Count] The rubric has fewer than 25 criteria.
	[Non-Fail - Criteria Count] The rubric has more than 100 criteria.
	[No Issues] The rubric contains 25 to 100 criteria.
Rubric Criteria - Weights	[Fail - Criteria Weights] >10% of the rubric criteria that AD1 and/or AD2 fail AND are weighted as Critically Important/Detrimental when they should be Slightly Important/Detrimental or vice versa
	[Non-Fail - Criteria Weights] 10% or less criteria that AD1 and/or AD2 fail AND are weighted as Critically Important/Detrimental when they should be Slightly Important/Detrimental or vice versa
	[No Issues] There are no criteria that AD1 and/or AD2 fail AND are weighted as Critically Important/Detrimental when they should be Slightly Important/Detrimental or vice versa
Rubric Criteria - Golden-Solution Neutrality	[Fail - Golden-Solution Neutrality] 20% or more of the criteria have major errors of this kind: they enforce subjective choices without room for equally plausible alternatives, and are neither comparable to the golden reference nor phrased leniently.
	[Non-Fail - Golden-Solution Neutrality] 11%-19% of the criteria have such errors.
	[No Issues] 10% or less of the criteria enforce an arbitrary subjective choice
Rubric Criteria - Overlap / Redundancy	[Fail - Overlap / Redundancy] - 2 or more criteria are redundant or overlapping (independently assessing the same elements).
	[Non-Fail - Overlap / Redundancy]- Exactly 1 criterion is redundant or overlapping with another.
	[No Issues] - No redundant criteria is present.
Rubric Criteria - Coverage	[Fail - Missing Coverage] - The number of missing rubric criteria that correspond to the brief's explicit requirements is ≥10% of the total rubric criteria count; OR the rubric set is highly skewed toward a handful of aspects and does not provide full coverage; OR the rubric set is too high-level — it includes only superficial checks and misses the elements professionals care about.
	[Non-Fail - Missing Coverage] The number of missing rubric criteria that correspond to the brief's explicit requirements is at least 1 but less than 10% of the total rubric criteria count 1+ implicit expectations are missing from the rubric.
	[No Issues] - The rubric covers all the explicit requests, the implicit professional expectations, and the expert-level nuances of the field (checks only a domain professional would know)!
Rubric Criteria - Relevance & Correctness	[Fail - Criteria Accuracy] 2 or more criteria are irrelevant to the task (no clear justification that they are a requirement), arbitrarily introduced, or assume region-based constraints the brief does not indicate
	[Non-Fail - Criteria Accuracy] Exactly 1 criterion is irrelevant, unjustified, or does not make sense given the brief
	[No Issues] Every criterion makes sense given the brief: all criteria are relevant, justified as requirements, and free of undeclared region-based assumptions.
Rubric Criteria - Atomicity	[Fail - Criteria Atomicity] - 4+ or 10% of the rubric (whichever is bigger) criteria combine unrelated checks together.
	[Non-Fail - Criteria Atomicity] - 1-3 or ≤9% criteria bundle unrelated constraints, or a few bundles are borderline but defensible.

	[No Issues] - Criteria are mostly atomic: no criterion bundles multiple unrelated constraints; combined criteria only pair elements that should be evaluated together.
Rubric Criteria - Self-contained or Vague Criteria	[Fail - Self-Contained or Vague Criteria]- 4+ or 10% of the rubric (whichever is bigger) criteria are vague or not self-contained. [Non-Fail - Self-Contained or Vague Criteria]- 1-3 or <=9% criteria are vague or not self-contained, and neither fail condition applies. [No Issues]- All criteria are: 1) evaluable on their own, 2) self-contained within the RD, the inputs, and the brief, and/or 3) self-contained by professional nuance if a professional task; none require external references to evaluate, and none are vague.
Rubric Criteria - Aesthetic & Comparative Depth	[Fail - Aesthetic Criteria] Design is central to the brief but the rubric has almost no aesthetic and/or functionality criteria when relevant, or judges aesthetics as a single lump. [Non-Fail - Aesthetic Criteria] The rubric has aesthetic and/or functionality criteria, when relevant, but misses key elements. [No Issues] The rubric grades each relevant visual/auditory element on its own, with aesthetic and or functionality depth proportional to how central design is.
Rubric Grading - Verdict Accuracy (RD/AD1/AD2)	[Fail - Criteria Verdict Accuracy] 10% or more of Pass/Fail verdicts per response are incorrect [Non-Fail - Criteria Verdict Accuracy] Less than 10% but at least 1 of Pass/Fail verdicts per response are incorrect [No Issues] Every Pass/Fail verdict for RD, AD1, and AD2 is correct.
Rubric Criteria - Criteria Justifications	[Fail - Criteria Justifications]: 20% or more of the criteria justifications are objectively inaccurate. [Non- Fail - Criteria Justifications]: 11%-19% of the criteria justifications are objectively inaccurate. [No Issues]: All the criteria justifications are correct and aligned with their ratings, OR only 10% or less of the justifications are objectively inaccurate.
Rubric Grading - Justification-Final Score Alignment	[Fail - Justification - Final Score Alignment] The preference ranking and rubric scores are in high contrast: the rubric totals show a large gap that opposes the stated preference direction, and the difference is well beyond a couple of percent. [Non-Fail - Justification Alignment] There is a modest mismatch between the preference direction and the rubric totals, a couple of percent but not a reversed story. [No Issues] The preference ranking and rubric totals tell the same story.
Rubric Grading - Golden Artifact Sanity (RD ≥95%)	[Fail - Golden Output Scoring] The golden output scores less than 95% on the rubric. [No Issues] Golden output scores 95% or higher on the rubric.
Task Setup - Brief & Input Sufficiency	[Fail - Brief & Input Sufficiency] The input side (details in the brief and input files) is severely missing to realistically carry along the task, and the contributor proceeded anyway instead of flagging it. [No Issues] The brief and input files are sufficient to realistically carry along the task!
All CB Generated Content - Unlisted Minor Errors	[Non-Fail - Unlisted Minor Errors] There are errors in the task that are not explicitly mentioned in the grading rubrics but prevent the task from being perfect.

[No Issues] There are no unlisted errors that you feel degrade the quality of the task
